

14 modules.

93 lessons.

0 fluff.

What production GenAI engineering actually requires.

Most Indian courses skip 80% of it.

Here's the full map →

THE PROBLEM

Most courses stop at Layer 1.

Production GenAI = 5 layers:

- 1 Prompt**
Crafting inputs to get useful outputs
- 2 Pipeline**
RAG, agents, tool-calling, chains
- 3 Evaluation**
How do you know the output is good?
- 4 Production**
Scale, latency, cost, fallbacks
- 5 Compliance**
PII, DPDP Act, hallucination liability

Layers 3-5 are where careers are made.

Foundations

First principles before frameworks.

01 Python for AI Engineers

Async I/O, dataclasses, structured logging

02 LLM Fundamentals

Build a tiny GPT from scratch — ~200 lines

03 Prompt Engineering, Properly

Versioning, A/B testing, structured prompts

04 Embeddings & Vector Search

FAISS, pgvector, sentence-transformers

We don't touch LangChain until Module 5.

Where it gets real

Patterns most tutorials skip entirely.

05 Retrieval-Augmented Generation

Hybrid retrieval, reranking, citations

06 Advanced RAG

GraphRAG, HyDE, Self-RAG for multi-hop

07 Agents, Tools & Function Calling

ReAct with proper error handling, step caps

INDIA ANGLE

Bhashini's Indic embeddings outperform multilingual-e5 on Hindi/Tamil/Telugu retrieval. We benchmark both.

Ship it

From demo to production in 4 modules.

08 Evaluation Pipelines

LLM-as-judge, regression testing, traces

09 Fine-tuning & LoRA

When fine-tuning beats prompting + RAG

10 Production Deployment

GCP Mumbai, Yotta Shakti, E2E Networks

11 Cost & Latency Optimization

Caching, batching, distillation, routing

Turn ₹1L/mo bills into ₹15K/mo bills.

India-first

What no global course covers.

12 Safety, Guardrails, Indian PII

Aadhaar, PAN, UPI VPA detection patterns

13 DPDP Act 2023 for GenAI

Consent, erasure, ₹250cr penalty architectures

14 Capstone: Ship a Real Product

End-to-end build, panel review, hireable

Built for Indian engineers, by Indian engineers.

GET THE FULL MAP

Free 25-page Roadmap PDF.

Inside:

- All 14 modules in detail
- Day-1 tooling stack (Python, Colab, GCP, HF)
- The Multilingual Token Tax — Hindi costs 2-3× more
- DPDP Act compliance for GenAI architects
- 30-day self-study plan (free path)
- When to self-study vs. join the cohort
